Augury | Roseburg Engagement Summary

- This report is built to help understand the status of the facilities' engagement with the Augury program, on an organization, business unit, and facility-specific levels, and compared to the Augury benchmark.

- The two main KPIs that are presented throughout this report are **Alert Response Rate** - the % of alerts that the facility responded to out of the alerts that were sent, and **Time to Response** - # of days from alert to the first response by facility.

- Both KPIs are based on **Alarm and Danger** alerts only, and not Monitor. The reason is that Alarm and Danger alerts require a prompt response, while Monitor alerts are less urgent in the majority of cases and require a different response depending on the facility.

- Both KPIs refer to any kind of response available in the platform: repair, observation on an alert
